

## DEDICATED TO LEARNING

Simple Ceremonies at the Blessing of Holy Cross College.

Many High Church Dignitaries Present—Bishop Spalding Delivers a Comprehensive Address on the University as a Nursery of Higher Life—A Banquet After the Exercises.

With the blessing of Cardinal Gibbons, Holy Cross College of the Catholic University of America was dedicated to the mission of learning yesterday afternoon. The ceremonies attending the dedication were simple but impressive, and were witnessed by Mr. Martinelli, the Archbishop who is in annual session, a number of Bishops and priests, and citizens from Washington. The exercises in connection with the dedication of the college commenced shortly after 4 o'clock, in the assembly room of McMahon Hall. In the audience were prominent Catholics, priests and laymen, Franciscan monks, and a number of people from this city. The presence of Cardinal Gibbons was the signal for applause which lasted several minutes. Among those present were Archbishop John Joseph Williams, of the archdiocese of Boston; Archbishop J. J. Kane, of the archdiocese of St. Louis; Archbishop P. N. Kater, of the archdiocese of Milwaukee; Archbishop William H. Elder, of the archdiocese of Cincinnati; Archbishop Michael Corrigan, of the archdiocese of New York; Archbishop Frederick John Byrne, of the archdiocese of Philadelphia; Archbishop John Ireland, of the archdiocese of St. Paul.

The exercises were opened with an address by Right Rev. John Lancaster Spalding, Bishop of the diocese of Peoria, Ill., his subject being, "The University as a Nursery of Higher Life." Bishop Spalding is known as one of the foremost Catholic educators, and has written many textbooks. He spoke in part as follows:

"In any time and country learning cures the disease of the purse fairly well, that of souls not so. It is the only way to the science of virtue all other knowledge is harmful."—Montaigne.

"An irrepressible instinct impels man to preserve and diffuse life. It is the instinct of his nature to think it good—not only good, but the standard by which all values are measured."

"Life is good and the highest life is the highest good. The morality of action is determined by its bearing on life. Religion and conduct spring from faith in its worth and sacredness and are efforts to attain its maximum. That men may have life and have it more abundantly, the Saviour came and the Church was established. For this the state is established. To increase the power and quality of life schools are founded, literature and science are studied, the arts are cherished."

"Life, more life, ever-increasing life is the aim and end of all we think and do. To inquire whether life is worth living is absurd, for life loves itself, and love originates all worth. Misconduct or misfortune may in individual instances destroy or even destroy the will to live, but the love of life and therefore the belief in life's goodness are indestructible."

"Civilization is the unity of a people's moral will manifesting itself historically. The universities of the past, as those of our own day, have but partially fulfilled their mission. They have been called to foster a deeper and purer moral life. Nay, often they have been still and are the nurseries of vice. The radical failure in moral failure, and the lack of moral effort does not promote conduct, which does not build character, bears within itself a moral taint. Our life is controlled and directed by our moral culture, and the moral culture we know, and the power to feel and will as an educable as the intellect. We can be taught to believe, hope, and love, to be brave, kindly, and helpful, and to have a moral earnestness in the pursuit of truth. It is not possible to learn to think to good purpose, when philosophy is studied as an intellectual pastime, and conduct is looked upon as a matter of policy, no genuine education can be given or received."

**Religious Faith and Conduct.** "Religious faith and conduct are the basis of right human life, and the student who is not inspired by this principle may become a brilliant or a famous, but not a great or a noble man."

"It is doubtless the business of a university to educate the intellect, to make mental culture direct, to give knowledge should not be separated from wisdom, nor moral from intellectual excellence. The primary and essential aim is to form men, not scholars. The student, like the author or artist, is an inferior being unless he is also a noble character—brave, loving, pure, upright."

"They who read how much of the spiritual activity of the present age is found outside of the Church cannot but see that the Catholic religion must move and more so to be a power in the world unless the Catholic character is morally and intellectually more alive. They must learn to understand that it is more important that they should do good than that they should do it in a particular way, more necessary that they should think than that they should think alike. In the presence of the vast movement of the modern world we Catholics seem to have grown timid, as though we feared lest human opinion should prevail against truth, man against God; and this lack of courage which makes us of little knowledge and less faith, makes us weak and dependent. The Catholic must aid to human progress is favorable to the Christian religion, to the worship of God in spirit and in truth. We must learn to walk without fear in the midst of a world of widening knowledge, to welcome every addition to the treasure house of the intellectual wealth of mankind, as a preparatory however remote for the Kingdom of God, for when entering the Kingdom we shall find that the note of Catholicism is to pray, there is nothing in Catholic faith which should impede advance in any department of learning. It is only when we come to draw inferences that the Church sounds the note of caution, and this it rightly understood is helping alike to the progress of science and to the soundness of religious doctrine."

"And what is all this but to proclaim our own shame. If we are retrograding, cowardly and inactive, if we suffer ourselves to be thrown into antagonism to living and fruitful movements, if we lack confidence in ourselves and in our cause, we drift aimlessly and poor forth vain lamentations over a past which cannot return."

**The University Student.** "The university student reaps the special fruit which such education should bear only when he acquires the philosophic mind, whose attributes, Newman says, are freedom, equanimity, calmness, moderation and wisdom. If any man, says Bacon, thinks philosophy and universality to be life studies he does not consider that all professions are from thence derived and supplied. And this I take to be a great cause that hath hindered the profession of learning, because these fundamental knowledge have been studied but in ignorance."

"If university students live and die commonplace men or worse, they never were in a true university or they never should have been in any."

"Great teachers make great schools. Because is the first university man, he is

followed by Plato, who is succeeded by Aristotle, and they are still the masters of those who think, for they pursued and taught philosophy as a theory of knowledge and life, and there is and has been no great school which study is not carried on in their spirit. Alexander the Great, the pupil of Aristotle, in founding a city at the mouth of the Nile, established there, about 330 years before the birth of Christ, the first university with a distinctive form and organization, and it soon attracted the most eminent scholars, and became a centre of inspiration and light for many a century. The students of the youth of the civilized world, among whom were some of the most famous of the Christian doctors. When we think of Athens, Rome, Alexandria, Paris, Oxford, and Konigsberg we think of the great, wise, and laborious men whose names are forever associated with them, men whose religious, moral, intellectual, and esthetic genius has illumined, ennobled, and strengthened the race to which they belong. These centres, whence has radiated so much of the best we know and love, never lose their interest, because the lives of genuine and enlightened men are a ceaseless source of charm and help. What divine purposes does not a real centre of the highest intellectual and moral life serve? If we are to have good primary and secondary schools, good universities, we must first have great universities."

**Making Rapid Advances.** "Whatever may be thought of the moral and religious progress or regress of America, there can be no doubt that our institutions of higher learning have now for more than a quarter of a century been making rapid advances."

"In any time and country learning cures the disease of the purse fairly well, that of souls not so. It is the only way to the science of virtue all other knowledge is harmful."—Montaigne.

"An irrepressible instinct impels man to preserve and diffuse life. It is the instinct of his nature to think it good—not only good, but the standard by which all values are measured."

## MR. SHILLINGTON RESIGNS

He Will Leave the District Attorney's Office Tomorrow.

Reductions in Salaries Given as a Cause for the Step—Return to Private Practice—Thomas C. Taylor, Appointed as His Successor—A Statement by General Anderson.

The resignation of Joseph Shillington, one of the assistant United States attorneys for the District of Columbia, was tendered the head of the office yesterday, with the understanding that it will take effect on the closing of the courts tomorrow. The resignation was accepted by District Attorney Anderson, who named Thomas C. Taylor as the successor to Mr. Shillington. The resignation of Mr. Shillington was generally discussed yesterday at the City Hall, everyone expressing regret at his determination to sever his connection with the District Attorney's office, where, during the last two years, he has scored many successes.

This step is taken by Mr. Shillington, it is rumored, because of the action of District Attorney Anderson in reducing the salaries of some of the assistants in his office.

While it is unofficially stated that Mr. Shillington's annual salary was reduced from \$2,800 to \$2,000 a year, this statement is not authenticated. In fact, there was a rumor last week to the effect that in part already paid, the salary of the chief clerk of the District Attorney's office, Mr. Shillington's pay would only be reduced \$400. When the rumor was first put in circulation that it was the purpose of District Attorney Anderson to make a graded reduction of the salaries of his assistants and some of the clerical force, Mr. Shillington, in the report, but refused at that time to make any statement further than to say that nothing definite had been decided upon.

Mr. Shillington, however, that if such action was taken by General Anderson it would be for the purpose of increasing the number of assistants in the office from four to five.

Mr. Shillington, however, that if such action was taken by General Anderson it would be for the purpose of increasing the number of assistants in the office from four to five.
